**DETAILED ACTION**

***Election/Restrictions***

1. Claims 2-7, 9, and 11 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected group, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on July 30, 2010.
2. Applicant's election with traverse of the Restriction Requirement mailed July 1, 2010 in the reply filed on July 30, 2010 is acknowledged. The traversal is on the grounds that the groups do not contain different special technical features when the claims are interpreted in light of the specification. This is not found persuasive because the specification does not indicate that the special technical features as indicated in the Restriction Requirement have a lack of unity. The examiner has reviewed the specification, and at [0012] and [0013], it is indicated that the crystallized glass having the diffraction peaks of claim 1 *can be* obtained by the method of claim 2 (emphasis added by examiner. However, it is not indicated that the two special technical features are intrinsically linked.

The requirement is still deemed proper and is therefore made FINAL.

***Priority***

3. This application is a 371 of PCT/JP05/01323, filed January 31, 2005, which claims priority to JP 2004-035380, filed February 12, 2004.

***Information Disclosure Statement***

4. The Information Disclosure Statements filed July 24, 2006 and January 8, 2010 have been considered.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1, 8, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Tatsumisago et al. ("New lithium ion conducting glass-ceramics prepared from mechanochemical  $\text{Li}_2\text{S-P}_2\text{S}_5$  glass").

Tatsumisago et al. teach solid-state lithium secondary batteries having electrolytes containing lithium, phosphorous, and sulfur (abstract; page 635 column 1).

Tatsumisago et al. teach the claimed diffraction peaks (Figure 6).
